

PROLUX 430BN COMMERCIAL MICROSCRUBBER & BUFFER

FASTENAL®

PROLUX
COMMERCIAL

The Prolux Microscrubber 430BN delivers a strong value proposition by drastically reducing operational labor costs (up to a 75% reduction) while improving cleaning standards and increasing productivity in commercial cleaning environments.

The primary advantage of the Prolux 430BN Microscrubber is its significant labor cost savings:

75% Reduction in Labor Costs:

The Prolux 430BN sprays, scrubs, and extracts dirty water in a single pass. Testing in a 10,000 sq ft area, cleaned twice per week, demonstrated annual labor savings of \$6,400, with the equipment paying for itself in approximately 5.3 months.

Improved Deep Cleaning for Industrial Applications:

Standard mopping has been shown to simply "push dirt around." In contrast, the Prolux 430BN Microscrubber provides increased scrubbing power while simultaneously extracting dirty water, resulting in visibly cleaner floors compared to traditional mopping.

Broad Application:

The Prolux 430BN's 18-inch cleaning path allows it to clean up to 10,000 sq ft per hour. With six included cleaning pads designed for different surfaces, it is well suited for a wide range of cleaning applications. Its quick-pivot design enables easy maneuvering around furniture and obstacles that larger floor scrubbers and buffers cannot reach. This efficiency and versatility make it highly attractive to large commercial operations, including K-12 and higher education facilities.
